New nucleic acid molecule encoding a kinase polypeptide, useful for preparing a composition for treating diseases or disorders, e.g., coor neurological, immunological or inflammatory disorders. cancer,

Claim 1; SEQ ID NO 99; 366pp; English.

This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (PTK's and STK's), as well as protein kinase-like enraymes. The present invention describes screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy

```
This invention relates to novel isolated, enriched or purified nucleic CC acid molecules that encode kinase polypeptides. Specifically, it refers CC to a biolinformatics strategy used to identify mammalian members of the CC protein and lipid kinase families. The present invention provides methods CC for identifying a substance that modulates the activity of a kinase cC polypeptide, as well as a method for the detection of a kinase nucleic acid in a sample as a diagnostic tool for a disease or disorder. CC Furthermore, it describes generation of a knock-out mouse whose genome is CC disrupted by recombination at a nucleic acid sequence such that it CC produces a phenotype, relative to the wild-type, that exhibits an absence CC of kinase activity. The nucleic acids and polypeptides given in the Specification are useful for the diagnosis and treatment of cancer, CC cardiovascular disease or inflammatory diseases, psychotic and neurological CC disorders, neuropeses and compositions exhibit cytostatic, CC antinigraine, analgesic, endocrine-Gen., nootropic, tranquilizer, CC inputensive, hypertensive, neuroprotective, antiparkinsonian, virucide, CC antiasthmatic, osteopathic, antidabetic, amorectic, antiarteriosclerotic, CC antiasthmatic, osteopathic, antipartiari, immunosuppressive, cardiant-CC gen, vasotropic, antiallergic and gastrointestinal-gen. This polypeptide is a murine protein kinase of the invention.

The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase antagonists may also be used to down regulate kinase cardiovaty include rheumatoid arthritis, atherosclerosis, autoimmune disorders, cardiomyopathies, strokes, renal failure, oxidative-stress related disorders, cardiomyopathies, strokes, renal failure, oxidative-integen also cardiomyopathies, strokes, renal failure, oxidative-integen related disorders, chronic inflammatory polvic disease, multiple sclerosis, asthma, osteoarthritis, psoriasis, rhinitis, autoimmunity, diabetes, cancers and reproductive
                                                                                                                                                                                                                                                                                                                                         neurodegenerative diseases and/or cancers
                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding kinase polypeptides, useful for diagnosing and treating immune-related diseases and disorders, cardiovascular disease.

Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative diseases. The present sequence is a MARK3 associated protein included in the figures but not mentioned anywhere else in the

                                                                                                                                                                                                                                                                                                                                   The invention relates to polynucleotides (AAKS1456-AAKS3435) and the encoded polypeptides (AAW78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiseis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAKS2581), 2111 (AAKS2582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication

                                                                                                                                                                                                                                                                    The present invention relates to human protein kinase. The proteins are from new human genes termed h12832, h14138, h14933, h15990, h15993, h16341 and h2252. The proteins may be used to identify modulators of their activity. The proteins may also be used to derive products for the treatment of cellular growth related disorders, malignancies, cancers, immune, inflammatory, respiratory, haematological and bone-related
                                                                                                                                                                                                                                                                                                                                                                                 New protein kinase polypeptides, nucleic acids and anti-kinase antibodies, useful for diagnosing and treating e.g. cancer, in immune, cardiovascular and bone disorders.

                                          The present sequence is a novel protein kinase. The novel protein kinases CC and the nucleic acids that encode them may be used in the treatment and CC diagnosis of diseases associated with inappropriate kinase expression Such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and disorders, cardiovascular disease, CC neurodegenerative diseases and/or cancers. The nucleic acids and CC complementary sequences may also be used as DNA probes in diagnostic assays. The kinase expression and activity. Anti-kinase antibodies CC assays. The kinase expression and activity. Anti-kinase antibodies CC and kinase antagonists may also be used to down regulate kinase CC expression and activity. Diseases related to kinase expression and CC immune disorders, complications of organ transplantation, myocardial infarction, transplantation, myocardial infarction, correct constructs related disorders, cardiomyopathies, strokes, renal failure, oxidative-current construction, pervised disease, multiple sclerosis, autoimmune osteoarthritis, portlasis, rhinitis, autoimmunity, diabetes, cancers and reproductive

length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs.
```

aim 8; SEQ ID NO 12777; 2537pp + Sequence Listing; English.

The present invention describes primer sets for synthesising 5602 full-CC length cDNAs defined in the specification. Where a primer set comprises:

((a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide comprises a 3'-end sequence complementary to a coligonucleotide which comprises a 3'-end sequence complementary to a coligonucleotide comprises a 3'-end sequence, where the coligonucleotide comprises a 3'-end sequence, where the coligonucleotide comprises a 3'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, and coligonucleotides, and coligonucleotides, and coligonucleotides, and coligonucleotides, and coligonucleotides, all of which are used in antisense therapy and in coligonucleotides, and coligonucleotides, all of which are used methods. AAH33623 to AAH3628 and coligonucleotides, all of which are used in the exemplification of the cDNAs. The primers are also was a special sed methods. AAH33629 to AAH3628 and coligonucleotides, all of which are used in the exemplification of the cDNAs.

                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                         The present invention describes assemblages and computer readable media comprising novel human cDNA sequences and clones derived from human foetal brain, foetal kidney, melanoma, testis and amygdala cDNA libraries. ABA93702 to ABA93766 represent human cDNA sequences from the present invention which encode the proteins given in ABB0562 to ABB05729. The human cDNA sequences and clones can be used in gene therapy. The clones may be used in a variety of applications, for example they may be used in profiling assays, for providing large arrays of human genetic material for implementing large-scale screening strategies and for treating diseases via gene therapy procedures
                                                                                                                                                                                                                                                                                                                                                    Sequence 535 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                  The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, comprisitive or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a compound that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotide sequence the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound that regulates the activity of one or more of the contribution of an animal of one or more of the contribution in the contribution of activity in an animal of one or more of the contribution in the contribution of activity in an animal of one or more of the contribution in the contribution of the contribution of the contribution of the contribution in the contribution of the contribution of the contribution of the contribution of the contribution in the contribution of 
activity in an animal of one or more of the polypeptides given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New composition comprising two or more isolated polypeptides, preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2003-268312/26.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (described in Table 3 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

CC encoding them (ADG10411-ADG10894) and to sequences with 95% or more CC homology to the STAT6-activating proteins and their encoding nucleic CC acids. The invention also relates to recombinant vectors and host cells CC comprising a STAT6-activating protein-encoding nucleic acid; the CC recombinant production of a STAT6-activating protein; antisense oligonucleotides and cribozymes targeted to nucleic acids encoding a STAT6-activating protein; CC methods of screening for activators or inhibitors of STAT6-activating protein; cc methods of screening for activators or inhibitors of STAT6-activating protein activating compositions comprising a modulator of STAT6-activating protein activating or expression; and methods of treating patients by CC administration of the drug compositions. The STAT6-activating proteins, CC nucleic acids encoding them, and modulators of their activity or expression and methods of treatment of allergic conjugations. The strategic patients of the conjugation of the diagnosis and treatment of allergic conjugations. The strategic patients of concer, inflammation, autoimmune diseases, diabetes, hyperlipidaemia, CC cancer, infections (e.g., HIV), cancer and disorders associated with Thi CCC hyperfunction. The present sequence is related to the invention.

                                                                                                  The invention relates to a compound comprising a sequence comprising 8-80 base pairs (bp) targeted to a nucleic acid encoding MARK3 (MAP/microtubule affinity-regulating kinse 3), that specifically hybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative diseases. The present sequence is a MARK3 associated protein included in the figures but not mentioned anywhere else in the
                                                                                                                                                                                                                                                                                                                                       New antisense compound targeted to a nucleic acid molecule encoding microtubule-affinity-regulating kinases (MARK3), useful for modulating expression of MARK3 or for treating cancer or Alzheimer's disease.
                                                             Sequence 535 AA;
                                                                                         specification.
                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2004-052188/05.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes human regulatory molecules (HRM) (I) selected CC from a group comprising the fully defined amino acid sequences of SEQ ID CC NOs: 1-49. Also described are: an isolated polynucleotide (II) comprising CC a nucleic acid sequence encoding (I) or the complement of the polynucleotide (SEQ ID NOs:50-98); a composition comprising (II) and a creporter molecule; an expression vector containing (II); a host cell containing the vector; detecting (M1) expression of a nucleic acid in a cc sample; screening (M2) a plurality of molecules to identify a ligand; CC dagnosing (M3) a disease associated with gene expression in a sample containing nucleic acids; a composition comprising (I) and a plurality of molecules to identify a plurality of molecules to identify a ligand; proparation and purification of antibodies; an antibody which specifically binds to (I); and detecting protein expression in a sample. The new human regulatory protein compositions which are useful in the diagnosis and treatment of disease associated with cell proliferation, particularly immune cremitatory and cancers. This is the amino acid sequence of a human regulatory compositions which are useful in the diagnosis and treatment of disease associated with cell proliferation, particularly immune

The present sequence is the protein sequence of human nuclear receptor CC binding protein (NRBP), a ubiquitously expressed, multidomain adapter CC protein. The inventors have discovered genes that modify the RAC GTPase CC pathway in Caenorhabditis elegans and identified their human orthologs as CC NRBPs. The invention provides methods for using these RAC modifier genes CC and polypeptides to identify NRBP-modulating agents that are candidate CC therapeutic agents that can be used in the treatment of disorders CC associated with defective or impaired RAC function and/or NRBP function. Preferred NRBP-modulating agents are CC and restore RAC function. Other preferred NRBP-modulating agents are CC uncleic acid modulators such as antiense oligomers and RNAi that repress CC mucleic acid modulators such as antiense oligomers and RNAi that repress CC waluated by in vitro or in vivo assay for molecular interaction with an RRBP polypeptide or nucleic acid. Agents that produce a change in the CC activity of there assay system relative to controls are identified as CC candidate RAC modulating agents. The assay system may be cell-based or CC cll-free. NRBP modulating agents include NRBP-related proteins (e.g. CC cll-free. NRBP modulating agents include NRBP-related proteins (e.g. CC cll-free. NRBP modulating agents include NRBP-related proteins (e.g. CC compete with an NRBP binding partner. The assay system may be call-based or CC compete with an NRBP binding partner. The screening assay may be an CC compete with an NRBP binding partner. The screening assay may be an CC compete with an NRBP binding partner. The screening assay or a hypoxic induction assay. A method for diagnosing a disease, especially XX

The invention describes an isolated nucleic acid molecule (I) encoding a covel central nervous system protein. (I) and polypeptides (III) encoded (I) are used to treat a medical conditions and in diagnosis of a CC pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative (I) disorders e.g. neoplasms of the breast or liver, cardiovascular disorders (I) cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, (I) angiogenesis, nervous system disorders e.g. Alzheimer's disease and (I) amylotrophic lateral sclerosis, infections caused by bacteria, viruses (I) amylotrophic lateral sclerosis, infections caused by bacterial viruses (I) c.g. corneal infection, gastrointestions and fungi, ocular disorders (I) c.g. corneal infection, gastrointestinal disorders e.g. dysphagia, (I) disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes (I) calcars (I) calcars (I) cancers and disorders at the cellular level e.g. cleukaemia, disorders involving neovascularisation e.g. malignancies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     08-NOV-2000,

NOTE: This is a 'working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced g1:23908481.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Shetty, J., Shvartsbeyn, A., Sisson, I., Sitter, C.D., Smajs, D., Sneed, A., Sodergren, B., Song, X.-Z., Sorelle, R., Sosa, J., Steimle, M., Strong, R., Sutton, A., Svatek, A., Tabor, P., Taylor, C., Taylor, T., Thomas, N., Thomas, S., Tingey, A., Trejos, Z., Usmani, K., Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Warren, J., Warren, R., Wei, X., White, F., Williams, G., Willson, R., Wleczyk, R., Wooden, H., Worley, K., Williams, G., Wilson, R., Wleczyk, R., Wooden, H., Worley, K., Wright, D., Wright, R., Wu, J., Yakub, S., Yen, J., Yoon, L., Yoon, V., Yu, F., Zhou, J., Zhou, X., Zhao, S., Dunn, D., von Niederhausern, A., Weiss, R., Smith, D.R., Holt, R.A., Smith, H.O., Weinstock, G., and Gibbs, R.A.

Center project name: KBQF

Center clone name: CH220-339B14

Center clone name: CH220-339B14

Center clone name: CH220-339B14

Assembly program: Phrap; version 0.990329

Consensus quality: 188047 bases at least Q40

Consensus quality: 189447 bases at least Q20

Consensus quality: 199412 bases at least Q20

Betimated insert size: 195068; sum-of-contigs estimation Quality coverage: 8x in Q20 bases; sum-of-contigs estimation Web site: http://www.hgsc.bcm.tmc.edu/Contact: hgsc-help@bcm.tmc.edu Center: Baylor College of Medicine Center code: BCM Project Information

NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 1 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have
provided by the submittor.

This sequence will be replaced

by the finished sequence as soon as it is available and the accession number will be preserved.

1 194709: contig of 194709 bp in length.
Location/Qualifiers

1. .194709

of Molecular and Human Geneme Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Nov 6, 2002 this sequence version replaced gi:23267220. The sequence in this assembly is a combination of BRC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (15-MAR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 248568)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2 (bases 1 to 248568) Worley, K.C.

NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
